

## Dent removal tools for plastics

Many bumpers are thrown into the landfill just because they are dented. Polyvance's 6119 Dent Drivers tool kit helps remove dents from plastic bumpers, keeping labor hours in the shop and plastic out of the landfill.

The ends of each Dent Driver tool have different shapes to help work out the knots and stretched areas often found around the perimeter of bumper dents. The variety of edges, points, and blunt areas available on the Dent Drivers give the technician the perfect tool profile for the task at hand. The curved, ergonomic shape of the Dent Driver tools fits readily into the hand to maximize pushing force and minimize fatigue.

The 6119 Dent Drivers complement Polyvance's other dent removal tool options. The main part of the dent would be popped out using the 6148 Bumper Rollers kit. Then the stretched areas around the edges of the main dent would be worked with the Dent Drivers. A Dent Driver can be used on each side of the bumper simultaneously to shrink stretched plastic. The Polyvance 6450 Bumper Bag Plus can also be used as a soft dolly to support the opposite side as the technician works the dent with the pointed edges of the Dent Drivers.

Polyvance offers several free instructional videos on dent removal at [www.polyvance.com](http://www.polyvance.com) showing the use of Dent Drivers as well as Polyvance's other dent removal tools.

### Features:

- Elongated ends for shaping body lines.
- Pointed tips for stretching and shrinking dents.
- Ergonomic shape to reduce wrist strain and improve grip.
- Low-friction construction slides on raw plastic and painted surfaces without damaging the part.
- Lightweight and strong truss-style construction.

### Benefits:

- Speeds and simplifies dent removal in plastic panels.
- Using this tool can mean the difference between having a bumper you can repair and one you throw away.
- Inexpensive for the benefit.
- Backed by Polyvance's reputation of quality repair tools and superior customer service.

### Includes:

- Two (2) Dent Drivers
- Two (2) Dent Driver Minis

### Instructions:

1. Heat area to be reshaped using a heat gun.
2. Push out the majority of the dent with 6148 Bumper Rollers.
3. Fine tune the profile using 6119 Dent Drivers.
4. Sand as needed, then prime and paint.
