

Estimating Plastic Repair

Estimating Plastic Repair Online Training Course

EPR-01

This online course is designed to educate collision damage estimators and other collision repair industry professionals on determining the severity and reparability of damaged plastic parts.

In this course, students will learn how to gauge the severity of damaged plastic bumper covers to determine reparability. Students will also learn about plastic types and how to identify them. The course explains the repair methods and materials used for different types of plastic.

This course will provide the essential plastic repair knowledge needed to write an accurate estimate. This knowledge will allow the student to recognize more plastic repair opportunities to increase profits and improve cycle times.

Training Objectives:

- Identify different types of plastic
- Understand the difference between thermoset plastic and thermoplastics
- Understand the various tools and products used for plastic repair
- Understand the methods used for the repair of different types of plastic
- Make an informed decision on repairing or replacing damaged parts
- Gauge the severity of damaged plastic bumper covers to determine reparability

EPR-01 training course (English)
