

Plastic Repair & Refinishing Instructor-Led Course (Two Day)

PR-02

This in-depth two-day course will teach students how to repair and refinish automotive plastic parts like bumper covers, headlight tabs, fender liners, fluid reservoirs and more.

Students will get hands-on experience using the nitrogen plastic welder to make strong repairs on a variety of damaged plastic parts. Emphasis will be placed on the proper nitrogen fusion welding technique.

Students will also receive hands-on experience in the proper use of plastic refinishing products such as adhesion promoter, filler, and primer. The course will also include a demonstration of the proper way to remove dents from bumper covers.

Shops that take advantage of plastic repair opportunities can experience reduced cycle time, reduced average cost to repair, and increased profits.

Training Objectives:

- Identify different plastic types
- Understand the basic nitrogen welding process
- Properly operate the nitrogen plastic welder
- Prep plastic parts for welding
- Weld a tear to the edge of a bumper cover
- Repair a torn slot tab
- Repair a torn flange
- Perform a weld test to identify plastic
- Repair a thermoset polyurethane (PUR) bumper cover with an airless plastic welder
- Work out dents and distortions in a plastic bumper cover
- Explain the process of repairing and refinishing a broken headlight mounting tab
- Refinish a welded bumper cover
- Texture plastic parts
